5	Professional vocabulary broad and precise; general vocabulary adequate to cope with complex practical problems and varied social situations.
6	Vocabulary apparently as accurate and extensive as that of an educated native speaker.
<u>Fluency</u>	
1	Speech is so halting and fragmentary that conversation is virtually impossible.
2	Speech is very slow and uneven except for short or routine sentences.
3	Speech is frequently hesitant and jerky; sentences may be left uncompleted.
4	Speech is occasionally hesitant, with some unevenness caused by rephrasing and groping for words.
5	Speech is effortless and smooth, but perceptively non-native in speed and evenness.
6	Speech on all professional and general topics as effortless and smooth as a native speaker's
<u>Comprehension</u>	
1	Understands too little for the simplest type of conversation.
2	Understands only slow, very simple speech on common social and touristic topics; requires constant repetition and rephrasing.
3	Understands careful, somewhat simplified speech when engaged in a

The previous studies that were conducted by Maya Rizki Fauzia, Ahmad Rusdi and Erlyna Abidasari focused on examining the implementation of the language learning programs which concentrate on improving speaking skill. The researcher concludes about the result of the researches that the implementation of the language learning programs gives positive improvement for the students' English ability.

The researches and this research have similar thing that wants to investigate the students' development by language learning programs outside the regular English class. Nevertheless, this research has different point with the researches above. The studies above are focused on the implementation of the language learning programs, but more important is to investigate the correlation of the students' performance of those programs with students' English achievement. Therefore, it is important to conduct a research about the correlation of students' performance in conversation class and students' English achievement in regular English class at SMPN 1, Balongbendo.

	<u>Accent</u>	
5	Pronunciation can be understood, as native speaker	17 – 20
4	Pronunciation can be understood but contains such certain dialect	13 – 16
3	Pronunciation can be understood but the hearer need to more concentrate in listening	9 – 12
2	Pronunciation is difficult in understanding	5 – 8
1	Pronunciation is unintelligible	0 – 4

The students' performance in conversation class was taken from the students' scores from the first lesson until the last lesson (see appendix 2). Then, the scores of each student was calculated to find the average (mean) of each score. The formula was below:

$$M_x = \frac{\sum X}{N}$$

Then, the result of the score calculation was tabulated into the table below:

19	FA	82
20	FZ	90
21	FK	88
22	GR	79
23	HFM	82
24	II	78
25	LAS	80
26	LPP	74
27	NUK	78
28	PDW	88
29	RTW	77
30	RANT	79
31	SNA	90
32	SUL	81
33	TS	76
34	TFP	88
35	YE	80

While, the implementation of the conversation class in the school was to enhance the students' English achievement in regular English class and to increase the student's English ability, especially in mastering speaking ability. Therefore, in the teaching and learning process, it contained other skills of English (listening, reading, and writing). Furthermore, the conversation class was held besides regular English class and the time provided by the school was one meeting in a week for 90 minutes.

Then, in the teaching and learning activities in the conversation class in eighth grade were applied presentation activity, debate activity, student simple translation activity (both of English into Indonesian and Indonesian into English), vocabulary pronunciation, dialogue activity, and student making comic activity. From the activities of students making a comic story activity, it indicates that the activity needs students' ability of writing. Then in the students' simple oral translation activity, it indicated that the activity needed students' listening ability because the students should heard the sentences from the teacher then the students gave the translation orally. For the students' story telling activity, it needed students to read the story script; therefore it required students' reading ability. It proved that the conversation class consisted of the various activities besides speaking activities.

In the other hand, the teaching and learning activities in the conversation class for seventh grade and ninth grade were not various as in the eighth grade. For the seventh grade, the activities that were conducted in

to find the strength of correlation between two variables, not to measure the influences between a variable to other.

Furthermore, the *r-observation* was 0.582 that we could interpreted in the simple way of interpretation that it was classified as moderate correlation meaning although the correlation had positive correlation but the correlation was in the moderate level which had limited correlation.

Then, the *r-observation* was compared with *r-table*; it was found that *r-observation* higher than *r-table* which could be concluded that there was significant correlation between students' performance in conversation class and students' English achievement in English class both at 5% and 1% level. Therefore, it gave evidence for hypothesis that there is a significant correlation between students' performance in conversation class and students' English achievement at SMPN 1 Balongbendo was accepted. While for the null hypothesis that there is no a significant between students' performance in conversation class and students' English achievement at SMPN 1 Balongbendo was rejected.

In conclusion, the result of data analysis showed that the students' performance in conversation class had a good performance as well as a good achievement in regular English class. Therefore, both variables correlated positively and significantly.
