CHAPTER V

CONCLUSION AND SUGGESTION

The last part of this study the researchers provides the conclusions and suggestions based on the analysis and discussion explained in the previous chapter. The conclusion is written based on the formulated statement of the problems whereas the suggestion is intended to give information and input to the next researchers who are interested in doing future research about deixis

5.1   Conclusion

There are three types of deixis that can applied in the video interview of Jordan Rudess entitled "Jordan Rudess Dream Theatre Interview and Live Rig Tour", such as: person or personal deixis, time or temporal deixis, and place or spatial deixis. Then, the researcher put some additional data for supporting the result of this thesis, there are 277 deixis in various types that found in the video of Jordan Rudess. The percentages of types of deixis for each classification are as follows; there are 257 or 93% person deixis, then 13 or 5% for the time deixis, and the last 7 or 2% for the place deixis. The first peson deixis has dominate the data. The word "*I*" is the word that is most often spoken by Jordan Rudes which the total amount that is 90 words, then followed by "*you*" which the total amount that is 56 words.

By knowing the pronoun, we can analyze all the statements of others by using deixis. For personal dexis like *We, Our, us, I, me, my, you and etc*, its focuses

45

on a person and encoding or term of the role of participants in the speech event that utterance. Then temporal deixis like *Now, Today, Last Years and etc*. Its focuses on the time and concern on the encoding of temporal points and spans relative to the time at which an utterance is spoken its. The last is spatial deixis, such as: *There, here*. Its focuses on the encoding of spatial locations relative to the location of the participants in the speech event. Therefore, by having understand well to deixis we can avoid the misunderstanding especially in the video, and also automatically we can understand the context by deixis in the daily communication.

5.2   Suggestion

Based on the findings and conclusions, the researcher suggest to students, especially in the fields of English, in order to open up their minds, that it is not only a president or a community leader around which we can use for research, but also a great musician who influenced the world can also be used for research because many researchers who studied about it. And for further research, the researchers suggested that focus on novel, movie, poem, song, or piece of literature is a good idea but the next researcher can try the others media or object in order to get different and newest the that it was just fine. Now is the modern era and can do anything through the Internet connection. It is hoped that further research could be examined in accordance with the progress of time using deixis. Like instagram, path, facebook, email, discussion forums, electronic news and others in order to create new research in the scientific and literary works.
