

CHAPTER V

CONCLUSION AND SUGGESTION

In this chapter, the researcher will provide conclusion and suggestion related to the discussion and research finding.

A. Conclusion

Based on the research finding, the conclusion can be presented as follows:

1. Basically, 6th semester students of English Education Department of UIN Sunan Ampel Surabaya's ability in pronunciation especially in sounds, rhythm, and intonation are good.
2. It was unfortunate that some students still did very basic errors, some of them even happened into the word that we usually used in our daily activity, the students confidence in pronounce their English still need to be improved. Some of the students still are ashamed to show or practice their pronunciation.

B. Suggestion

After investigating some important points during the research, some suggestions are given as follows:

1. For the Lecturer

The lecturer must improve students confidence in pronounce their English. As we know that practice makes perfect. Lecturer must give more attention to students' ability in pronunciation had we know that pronunciation is the modal of good speaking.

2. For the Department

The department must concern that students need more practice environment. It is because English is a skill instead of knowledge. Students need more place to practice their English. Or maybe the department could add another lecture or activity that can improve students' ability in pronunciation.

3. For the students

The students have to consider that they must find their own way to improve their ability in English pronunciation. The students could increase their English time. It means there will be more English practice while they are off from lecture. They must realize that their ability will improved when they are practice more. They can use English as their daily interactive with their friend, at campus, messaging, or on a phone call.

4. For further researcher

If the next researcher want to make the similar research with this one, the researcher suggest for them to find more valid test and assessment.
