

CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

The result of this research study is concluded that EdPuzzle media improved the writing skill in recounts text. According to the paired sample t-Test, the conventional media was not giving much effect on students' learning achievement. In other side, the EdPuzzle media gave the significant effect on learning achievement.

Based on the finding of the analysis, it can be conclude that there was a significant difference in the writing skill in recount text between the eighth grade students' of SMPN 1 Mojoanyar who were taught by using Edpuzzle media and those who were not. The Teacher also could monitor the students' progress using Edpuzzle media. According to the assignment given, students also could download the video and re-learn it at home for their better understanding.

B. Suggestion

Based on the research that has been conducted with a variety of the results that have been obtained, the researcher may give suggestions as follows:

1. For teachers

The materials provided in EdPuzzle should have balanced content and context, so that students interested in learning and material to be conveyed could be well absorbed by students. In addition, the instructions given should be simple and could be understood by students easily.

2. For other researcher

For other research can use some unexplored parts of the study, such as student motivation to learn to use EdPuzzle, student perceptions when using EdPuzzle, and whether EdPuzzle was appropriate to students' needs and wants. It is also suggested to conduct studies on the implementation of Edpuzzle in other subject lesson.
