Demikian pernyataan ini yang saya buat dengan sebenarnya.

Surabaya, 9 April 2019

Penulis

(Nurul Uswatun Hasanah)

Therefore, learners changing English sounds into Indonesian sounds is the common thing to do. While the term of pronunciation will be used for presenting the contribution that deals exclusively and unambiguously with pronunciation features. English is not the first language of Indonesian people, however English as a foreign language by Indonesian people who learn English. In Indonesia, English becomes one of the education's subjects that is important for the students in their school.

Talk about education in Indonesia, it is because English includes the lesson which is examined in National examination. The level of education in Indonesia has three levels of education, first is Elementary School, second is Junior High School or middle school level, and third is Senior High School or high school level. English lesson has been introduced from Elementary School to introducing with several basic patterns about English. In Junior High School or middle school, students further deepen the grammatical patterns to shows the correct sentence pattern and the meaning it. While, in Senior High School or high school level, the students more emphasis on reading, listening, and writing English skills.

Furthermore, Indonesian people especially Indonesian students who learn English that have problems in pronouncing the English word, when first language does not have the same vowel and consonant with English. Based on Brown states, the problems refers to performance error which is deliberate, there was a failur to utilize a known system correctly (2007). The common errors of the researcher found in Indonesian learners that are difficult to pronounce the words

only enough to hear the pronunciation, but also with writing the phonetic. There are some researchers that have done discussed about phonological error. Those are Putri (2015) discussion about minimal pair drill for students, she focuses on the teaching of pronunciation in minimal pair words. Those are Mulyadi (2017) analysis about pronunciation by Pattani's students in English fricative consonants. Those are Fakhrunnisa (2017) discuss pronunciation error on English vowel monophthong sounds in SMKN students and Wulansari (2017) discusses errors pronunciation by college in English vowel diphthong. So, in this research, the data took from Junior High School students.

There was one research from Putri (2015) under the title "The Effectiveness of Minimal Pairs Drill Towards Students Ability in Pronouncing Similar Sounds of Words: A Quasi-Experimental Study in the Eight Grade of Mts. Khazanah Kebajikan). The study aimed to analyze the effectiveness of minimal pair word drill to students for pronouncing similar words. She conducted her research in MTs Khazanah Kebajikan for eight grade student in 2014 – 2015 academic years. She analyzed students' pronunciation by giving the test for them. The design in her research that uses quasi-experimental. She took some samples for her data which were taken from the VIII C class as a controlled class and the experimental class from VIII BP class. Both of them, there is consist of 20 students. Collecting the data, she was given the test those are pretest and post-test. The result of the research showed that students' score for the effectiveness of minimal pair drill towards students' ability is higher than their pronunciation in similar words sound. Based on her research above, she focused on how to teach or

drill pronunciation when in the similar sounds but different words or that can mention minimal pair words. Furthermore, in order to fill the gap of the research, the next researcher will focus on analyzing pronunciation error made by Junior High School based on minimal pair words which are consist of English consonant and English vowel sounds.

In 2017, there is a research about error pronunciation conduct by Mulyadi. She is entitled her research “An Analysis of English Pronunciation of Pattani’s Students in Pronouncing English Fricative Consonants at the English Fricative Consonants at the Eight Semester of English Study Program Raden Intan State Islamic University of Lampung in the Academic Year of 2016/2017”. Aims of this research there is common of pronunciation errors in pronouncing English fricative and find the percentage of errors in English fricative and find the causes of errors that made by participants also. She uses qualitative method to analyze the data. For collecting the data, she recorded the pronunciation from the participants. Then she transcribe with online transcribe, Oxford dictionary, and Cambridge digital dictionary. For the result shows, the participants were error pronunciation in fricative [ʒ]. The researcher found some causes of error by participants based on inter lingual and intra lingual pronounce, there are fricative [θ], [ð], [ʒ], [θ], [ð], [t], and [d]. Based on her research, she research in fricative consonant sounds. For the participants, she chooses the collages in Pattani’s students who learn in State Islamic University of Lampung at eighth semester. Therefore, the next researcher chooses consonants and vowel there are consists of fricative, voice, and voiceless consonants and also monophthong and diphthong

vowel sounds. For the object of the next research there is conduct in Junior High School students in Waru Sidoarjo.

The next researcher concerning on pronunciation is Fakhrunnisa in 2017. She has conducted her research under the title Indonesia – Javanese Students' Pronunciation of English Monophthongs (A Case Study of Students of English Debating Club of SMKN 7 Yogyakarta). This aimed to analyze the problem of non – native speaker of Indonesian – Javanese pronunciation in English monophthongs. That research describes how Indonesia – Javanese students of SMKN 7 Yogyakarta pronounce English monophthong vowels, then what is the effect of the students pronunciation, and identifying the sounds changes by the SMKN 7 Yogyakarta students. Design of her research is descriptive qualitative method. The data is obtained with observation, interview, and documentation. For analysis of this research, the researcher uses theory about Phonetic and Phonology of English, Indonesia, and Javanese. For the result, there are three conclusions. For the first, that found English monophthong vowels are pronounced by SMKN 7 Yogyakarta Indonesia – Javanese students in correct and incorrect pronunciation. Second, factors that affected by the students doing incorrect pronunciation are influence of familiarity in English borrowing words then frequency of English words, whereas the rapid speech is the general factors in their incorrect pronunciation and then confusion in differentiating British or American accents. The last, sound changes are found by the SMKN 7 Yogyakarta students in their pronunciation are long vowel shortening, lowering, centralizing, and heightening of vowels. Based on her research, she only research about

English vowel monophthong by SMKN student's incorrect pronunciation in speech program. Furthermore, in order to fill the gap of this research focuses on pronunciation error by Junior High School students in minimal pair words which are consists of English consonant and vowel.

Furthermore, in 2017 there was one additional research about pronunciation errors conducted by Wulansari. Her thesis was entitled Student's Errors in Pronouncing English Vowel Sounds: an Acoustic Analysis Across Different Levels of Ability at UIN Sunan Ampel Surabaya. the percentage of vowels sound quality are used by three different levels students of English Literature at UIN Sunan Ampel Surabaya and the most difficult vowel sounds produced by the three different levels of the students. The technique of collecting data is descriptive quantitative as the design of the research. She chooses three level of the students in Islamic State University of Sunan Ampel Surabaya they are second, fourth, and sixth level. The writer concludes, the most difficult vowel or vowel error made by three different levels (second, fourth, and sixth semester) are vowel /æ/, the total of incorrect vowel quality is 75. The average of the students made those errors was about 28.4%. It was taken from native that came from America, she takes 20 American participants by using pronunciation recording and measures by using Praat software. The participants were asked to pronounce 30 words made by the writer. And then, she reveals the sound production. The writer took the frequency data of native and compared with three different groups (second, fourth, and six semesters). The data of American would be the correct pronunciation and the writer took the average of the data. Based on

her research, she only focuses on vowel sounds, and she didn't explain about the factor of pronunciation errors was doing.

After analyzing all of those previous studies presented above, the present researcher concludes that there is still incompleteness in their research such as from Mulyadi research, she does not explain more about the background of the object in her research, she only research about fricative consonant sounds, she doesn't research vowel sounds. Therefore, looking at Fakhrunnisa and Wulansari research, there were one kind object in their research, they are only focused on English vowel only. Therefore, this research will be different from others research because the writer chose to analyze in minimal pair words which consists of English consonant and vowel sounds, the data will be Indonesian learners in Junior High School or middle school levels in around Waru Sidoarjo students.

All of the Junior High School students that must learn English in the school, especially for eighth grade they are must learning English lesson. So, the students in Junior High School have relatively good English basic skill such as in pronunciation, vocabulary, and grammar, the purpose of that is requiring to learn pronunciation correctly also. Based on the explanation above, English is an important lesson for Junior High School students especially in Waru Sidoarjo that is the good district to learn English. However, sometimes their pronunciation is getting an error when they deliver speak or read English. That is why it becomes an interesting subject for this research. In this case, the data of this research deliver by Junior High School in English lesson. Then, this research focus on phonology in segmental features especially in consonant and vowel. Therefore,

In conclusion, phonology is sounds pattern of language. Phonology itself have two categories, there are supra-segmental and segmental. While, phonetic is sounds production of language. Phonetic are divide into three categories, there are: auditory phonetic, acoustic phonetics, and articulatory phonetic.

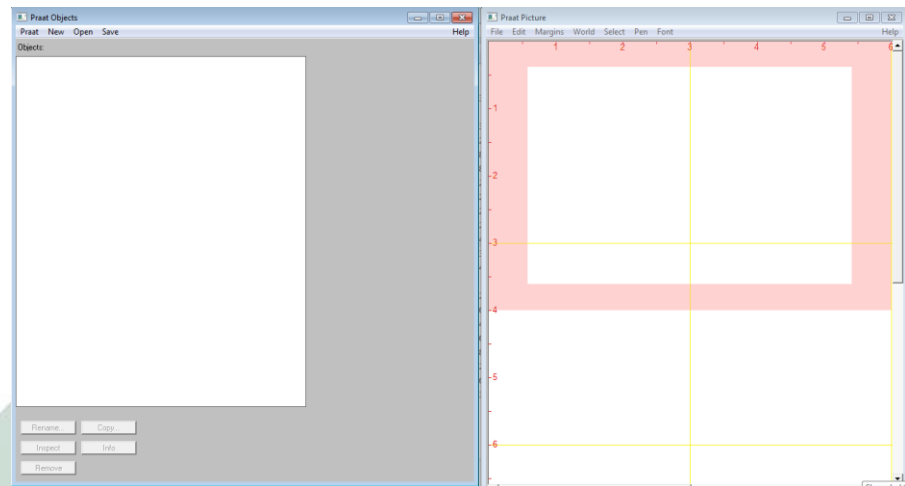

2.1.3 English Vowel Sound

According from Odgen states, syllabic sounds that made with free passage air down into middle line of the vocal tract that is usually convex tongue with shape and without friction (2009). The varieties of the vowel usually found in the center of syllable it is rare be able to stand alone as whole syllable. It means vowel sound has not physical contact between tongue and mouth. Supported by McMahan theory, vowels are the way of airflow through the oral tract is not significantly obstructed during their production (2002). The various kinds of English vowel sounds, there are: monophthong and diphthong vowel sounds. There will be classified are:

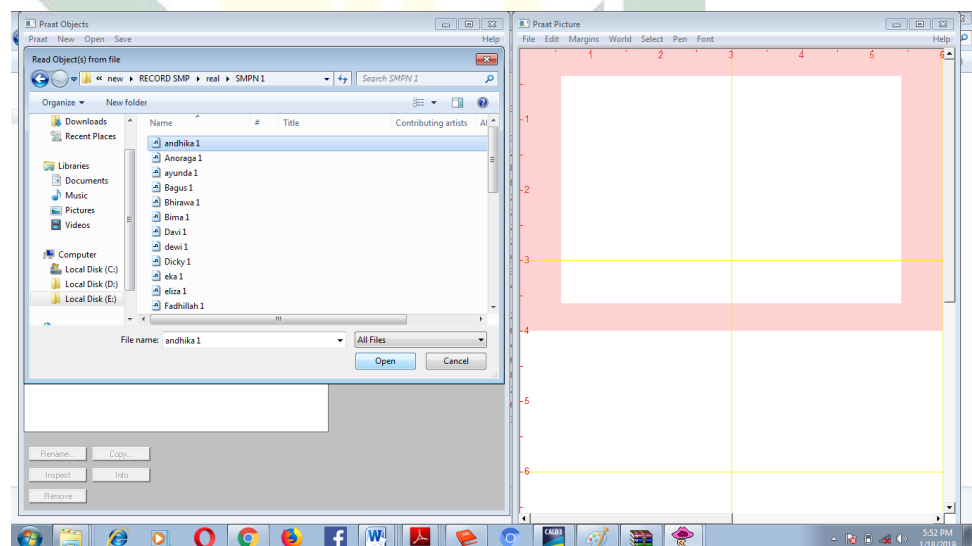

2.1.3.1 Monophthong Vowel

According from McMahan (2002), the most of the vowels we have considered so far have been monophthongs, in which the quality of the vowel stays fairly consistent from the beginning of its production to the end. It means that has a single constant articulatory position. Diagram of monophthong vowel, was displayed in *figure 2.1*:

3. The researcher opened Praat software to analyze the data
4. When the researcher opened the software, the software was in two windows.

5. The researcher chose the sound for analyzing

From 60 participants, 22 students pronounce the consonant /d/ - /t/ in word “right” and “ride” incorrectly. There are 8 students from Junior High School 1 Waru, and 2 students from Junior High School 2 Waru, then 7 students from Junior High School 3 Waru, the last 4 students from Junior High School 4 Waru who make pronunciation error according to the correct transcription.

The students who make pronunciation error by Junior High School 1 Waru, they are: Naila, Nazwa, Wahyu, Andhika, Jody, Bagus, Davi, and Surya. While, pronunciation error is made by Junior High School 2 Waru students, they are: Diky, Geya, and Bhirawa. However, there are 7 students from Junior High School students 3 Waru, they are: Rasya, Rouf, Agung, Robertus, Febrian, Rany, and Ayu. The last, 4 students from Junior High School 4 Waru, they are: Novena, Esa, Danis, and Iqbal.

The students who make pronunciation error have same mistakes also in pronouncing “right – ride”. In phonetic transcription “right” as [rait] has a voiceless sound, while in phonetic transcription of “ride” a voiced consonant sound employs as [raid]. Therefore, the minimal pair words have different consonant sounds.

22 students from Junior High School in Waru have the same mistake, they could not differentiate voiced and voiceless consonant sounds. All of the students’ mispronounce “right” and “ride” has the same voiceless consonant sounds. The transcription of students’ mispronunciation of “ride” is [rait]. The researcher got 53,3%, 20%, 46,7%, and 26,7%. Junior High School students have found difficulties in pronouncing consonant d/t in which Junior High School 1 Waru

School 1 Waru, and 8 students from Junior High School 2 Waru, then 9 students from Junior High School 3 Waru, the last 5 students from Junior High School 4 Waru who make pronunciation error according to the correct transcription.

The students who make pronunciation error in /k/ - /g/ consonant sounds by Junior High School 1 Waru there are 10 students, they are: Naila, Nazwa, Sabrina, Dewi, Ayunda, Eka, Andhika, Jody, Hafidz, and Surya. Whereas, 8 students from Junior High School 2 Waru, they are: Adis, Fairuz, Diky, Satria, Sandy, Vina, Geya, and Angga. Then, Junior High School 3 Waru that found 9 students, they are: Rouf, Tangguh, Farel, Farhani, Rany, Zalsa, Ayu, Leli, and Anisa. The last, Junior High School 4 Waru least then another school, there are 5 students, those are: Meylani, Esa, Lusi, Diaz, and Sisdina.

20 Junior High School students have the same mistakes when the students pronounce “back” transcript as [bek] and “bag” transcript as [bek]. So, the students do not know how to distinguish to the pronunciation of minimal pair words which is the same pronunciation. Even though, /k/ is voiceless sounds and /g/ is voiced sounds and they could not pronounce “back” and “bag”. They are stressing in vowel /e/ not /æ/. Moreover, 10 students have the same mistakes in pronounce “bag”, they are pronounced [bæk] as a transcription, while /k/ consonant is voiceless sounds and /g/ consonant is voiced sounds. The transcribed of [bæk] is “back”. Meanwhile correct phonetic transcription the word “bag” is [bæg]. The result, 10 students do not know how to distinguishing to pronounce that words that is why they are pronouncing with same consonant sounds.

4.1.1.1.7 Consonants [tʃ/t]

Consonants	Junior High School	Total	Percentage
tʃ / t	JHS 1 Waru	7	46,7 %
	JHS 2 Waru	4	26,7 %
	JHS 3 Waru	5	33,3 %
	JHS 4 Waru	1	6,7 %

Table 4.8

From 60 participants, 17 students pronounce the consonant sound /tʃ/ - /t/ in word “catch” and “cat” incorrectly. There are 7 students from Junior High School 1 Waru, and 4 students from Junior High School 2 Waru, then 5 students from Junior High School 3 Waru, the last only 1 student from Junior High School 4 Waru who makes pronunciation error.

The students who make pronunciation error in /tʃ/ - /t/ consonant by Junior High School 1 Waru there are 7 students, they are: Naila, Wahyu, Andhika, Jody, Bagus, Davi, and Surya. Whereas, Junior High School 2 Waru 4 students, they are: Bella, Reniken, Geya, and Angga. For Junior High School 3 Waru that found 5 students, they are: Aryo, Farhani, Rany, Ayu, and Leli. The last, Junior High School 4 Waru only one student who makes pronunciation error, she is Novena.

There are 10 students who make pronunciation error “catch”. The correct phonetic transcription of the word “catch” is [kætʃ], however, 10 students consists of 2 students from Junior High School 1 Waru, 3 students from Junior High School 2 Waru, and 5 students from Junior High School 3 Waru who make

students, those were: Agung, Robertus, Aryo, Febrian, Dwi Habibi, Tangguh, Farel, Farhani, Rany, Ayu, Leli, and Anisa. For the last, from Junior High School 4 Waru there were only 2 students: Lusy and Samsul.

In this case, minimal pair words "*feel*" and "*fill*" consists of 2 vowels monophthong but different in pronounce, "*feel*" has long vowel monophthong and "*fill*" has short vowel monophthong. Moreover, the differences between those words are based on short and long its vowel monophthong. Some students who got the same mistake in pronouncing the word "*feel*" and "*fill*", there were 23 students. They mispronounced in vowel /ɪ/, which is short vowel sound. They pronounce word "*feel*" as [fil]. Otherwise, the word "*feel*" should have long vowel monophthong, but some of students pronounce it in short vowel monophthong.

Furthermore, 3 students from junior high school 2 Waru have similar mistake, they reversed between two words. They pronounce "*feel*" as [fil] and pronounce "*fill*" transcript as [fi:l]. Those 3 students cannot distinguish the pronunciation of the short vowel and the long vowel sounds. The researcher got 46,7%, 33,3%, 40%, and 43,3%. Junior High School students that found difficulties in pronouncing consonant i: / ɪ in which Junior High School 1 Waru carried most mistakes for the percentage of 46,7%.

4.1.1.2.2 Vowel [e/i]

Vowels	Junior High School	Total	Percentage
e / i	JHS 1 Waru	1	6,7 %
	JHS 2 Waru	7	46,7 %
	JHS 3 Waru	2	13,3 %
	JHS 4 Waru	0	0 %

Table 4.12

From all of the participants, 10 students who mispronounced vowel /e/- /i/ in the word “left” and “lift”. There is 1 student from Junior High School 1 Waru, however 7 students from Junior High School 2 Waru, then 2 students from Junior High School 3 Waru, and the last no student from Junior High School 4 Waru who makes pronunciation error according to the correct transcription.

The students who make pronunciation error in Junior High School 1 Waru is only one student, she is Eka. However, 7 students from Junior High School 2 Waru, they are: Rita, Mela, Adis, Satria, Artha, and Reniken. And 2 students from Junior High School 3 Waru, they are: Aryo and Tangguh. For the last, from Junior High School 4 Waru no student who make pronunciation errors in this vowel.

Vowel /e/ and /i/ are the same short vowel monophthong. However, many students pronounce “lift” transcript as [laift], they pronounce /i/ vowel monophthong have changed into /aɪ/ vowel diphthong. Furthermore, Junior High School 2 Waru students have pronunciation error in “left” transcript as [lef] and “lift” transcript as [laift]. They are mispronouncing in the suffix which is stressing

All of the participants, 30 students pronounced the vowel sound /e/ - /ei/ in word “wet” and “wait” incorrectly. There were 10 students from Junior High School 1 Waru, and 9 students from Junior High School 2 Waru, then 6 students from Junior High School 3 Waru, the last 5 students from Junior High School 4 Waru who made pronunciation error according to the correct transcription.

The students who made pronunciation error from Junior High School 1 Waru was 10 students, they were: Naila, Dewi, Ayunda, Eka, Wahyu, Andhika, Bagus, Fakhriyan, Davi, and Surya. However, 9 students from Junior High School 2 Waru, they were: Mela, Adis, Fairuz, Satria, Bella, Reniken, Geya, Annisa, and Bhirawa. And 6 students from Junior High School 3 Waru, they were: Aryo, Dwi Habibi, Farel Rany, Leli, and Anisa. The last, from Junior High School 4 Waru there were 5 students: Novena, Diaz, Kanaya, and Samsul.

All of the Junior High School students in Waru Sidoarjo had same mistakes in pronouncing “wet – wait”. In phonetic transcription “wet” transcribed as [wet]. According to the theory in chapter II “wet” is vowel monophthong, while in phonetic transcription of “wait” transcribed as [weɪt], however, “wait” is vowel diphthong. Therefore, that minimal pair words had different vowel sounds.

25 students who made pronunciation errors in vowel sound had same mistakes, they could not differentiate between monophthong and diphthong vowel. All of the students who made pronunciation error in diphthong vowel “wait”, they were considered to pronounce “wet” and “wait” were [wet]. Actually those were different vowel sounds. The transcription of all the students who made

In this case, the minimal pair word consists of two different vowel sound, those were monophthong and diphthong. Based on correct transcription of the words “*not*” and “*note*” are [nɔ:t] and [nɔʊt]. Some students who got the same mistake in pronouncing the word “*not*” and “*note*”. 3 students had mispronounced word “*note*” as [nɔ:t] and 5 students had mispronounced [not]. Based on correct transcription, that word has /oʊ/ vowel diphthong. Nevertheless, 8 students are pronounced that with long vowel and 5 others are pronounced it with short vowel. Moreover, they still cannot pronounce a word that should has vowel diphthong. They could not pronounce /ɑ:/ vowel monophthong. Furthermore, 9 students mispronounced word “*not*” as [not] and “*note*” as [not]. Even though, the word “*note*” has vowel diphthong but they pronounce it with short vowel, while word “*not*” has vowel monophthong with long vowel pronunciation, however they pronounce it with only short vowel. They are same pronunciation between that words, it means that they could not distinction between minimal pair words are. For the next, there were 6 students mispronounced word “*note*” as [nɔ:t] which is same before, then word “*not*” [not] that same before also, they pronounce word “*note*” with long vowel pronunciation, even that word should be uses vowel diphthong. All of 6 students had error in word “*not*” as well as the previous error, there are when they got lack in emphasizes and lengthen in their pronunciation. The researcher got 60%, 33,3%, 13,3%, and 26,7%. Junior High School students that found difficulties in pronouncing consonant /ɑ:/- /oʊ/ in which Junior High School 1 Waru carry most mistakes for the percentage of 60%.

4.1.1.2.7 Vowel [æ/eɪ]

Vowels	Junior High School	Total	Percentage
æ / eɪ	JHS 1 Waru	12	80 %
	JHS 2 Waru	13	86,7 %
	JHS 3 Waru	15	100 %
	JHS 4 Waru	1	6,7 %

Table 4.17

41 students pronounce the vowel /æ/ - /eɪ/ in word “hat” and “hate” incorrectly. There are 12 students from junior high school 1 Waru, and 13 students from Junior High School 2 Waru, then all of the students from Junior High School 3 Waru, the last only one student from Junior High School 4 Waru who makes pronunciation error according to the correct transcription.

All of the participants who make pronunciation correctly there are 3 students from Junior High School 1 Waru, 2 students from Junior High School 2 Waru, and 14 students from Junior High School 4 Waru. They name are Dewi, Hafidz, and Bima from junior high school 1 Waru, Fairuz and Vina from junior high school 2 Waru, and all of the students in junior high school 4 Waru there is nothing wrong in pronunciation except Samsul. They pronounce “hat” and “hate” correctly. The phonetic transcription “hat” is transcribed as [hæt] and “hate” is transcribed as [heit].

However, other students have error pronunciation which is pronunciation error in “hate”, they pronounce as [hæt]. They pronounce “hat” and “hate” same

English movie, listening English songs, and playing English games. Moreover, the researcher divides two categories which were possible situations of pronunciation error by Junior High School students in Waru Sidoarjo.

4.1.2.1 Student's Lack of Learning English

The result of this research based on four schools that have been carried out by the researcher for all of the students who participated in English lessons at school. Except two students who had not interested to learn English, one of them is Junior High School 3 Waru his name is Rasya, he mispronounced 6 minimal pair words. The other one was from Junior High School 4 Waru his name is Diaz, he mispronounced 6 minimal pair words also. Even though, they did not like English lesson, they still had to learn English lesson at school. English was a compulsory subject in school that must be studied and followed by the students.

English lessons, it does not enough to reduce of pronunciation errors. The students must increase their learning in practice English pronunciation outside of the school to improve their pronunciation those are like learning English at home. Based on the result of the research, 6 students learned English at home again. They were Nazwa, she mispronounced 6 minimal pair words, Sabrina mispronounced 5 minimal pair words, and Fakhriyan mispronounced 6 minimal pair words there were from Junior High School students 1 Waru. Rita and Sandy from Junior High School students 2 Waru mispronounced 5 minimal pair words. The last one is Abdillah, he mispronounced only one minimal pair words was from Junior High School 4 Waru. Whereas, Junior High School 3 Waru there was no one student who learned English at home again.

Another social situation, students interested to learn English in English course. Based on this research, 10 students had been added to English course, they were Nazwa, Sabrina, and Fakhriyan from Junior High School 2 Waru students have mispronounced in minimal pair words that same before. Angga mispronounced 2 minimal pair words, Vina mispronounced 3 minimal pair words, and Bhirawa mispronounced 6 minimal pair words those are Junior High School 2 Waru students. Febrian is Junior High School 3 Waru student who mispronounced 4 minimal pair words. The last from Junior High School 4 Waru students, there are Keisya mispronounced 2 minimal pair words, Kanaya mispronounced 2 minimal pair words, and Erin mispronounced 3 minimal pair words.

Generally, in English course, the students were given some materials to grow up in English skills, such as reading, listening, writing, and speaking. The speaking skill was learning pronunciation also. Therefore, they will be taught how to pronounce English based on English consonant and vowel sounds. Moreover, by enrolling to the English course program, the students who participate can reduce mispronunciation of English better than the students who only learn English at school. The results of students who are interesting to learn English from Junior High School 1 Waru, moreover the most frequent pronunciation error there was from them.

4.1.2.2 Daily Activities Affected to Students in English Pronunciation Skill

Based on student's daily activities to apply English, there is a way to improve the student's pronunciation skill. By doing activities that related with English in daily life, such as: listening music based on native speakers, watching

English movies based on native speaker, and playing online games which is directing by English speaking or offline games that supported to learn English. To apply English in daily life based on native speakers, it supports English skills, especially in pronunciation skill.

First, daily activities in apply English language, there is listening English music based on native speaker. Music is important role to develop English learning for children especially. The students listen English songs to learn how to pronounce various vocabularies as well as and correctly. Meanwhile, 32 students liked to listening English song, more than 10 students liked to listen music than watch movie, the reason why the students could explore their vocabulary with song lyrics. The influence of learning with songs is very large because they can pronounce most of the words well and correctly. In this case, English song was very interesting to attract student's attention to learn English pronunciation

Second, the students learn English by doing this activity by watching English movie. There were 22 students who liked watching an English movie, those were 4 Junior High School 1 Waru students the most mistakes of mispronounced were 5 minimal pair words, 3 Junior High School 2 Waru students the most mistakes of mispronounced the most mistakes were 6 minimal pair words, 3 Junior High School students 3 Waru the most mistakes are 9 minimal pair words, and 12 Junior High School 4 Waru students at least 1 minimal pair words but the most mistakes are 7 minimal pair words. By watching English films, students are able to improve in speaking English by imitating what has been said by the actors.

The last, those were 13 students who liked English game, these result indicate game less charmed that movie and songs. Those were 3 Junior High School 1 Waru students who like game online to increase English learning, there were: Nazwa, Sabrina, and Hafidz. The most mistakes between of them were 6 minimal pair words. Then, only one Junior High School 2 Waru student who liked gaming, he is Fairuz. He mispronounced 6 minimal pair words. The next, there were 4 Junior High School 4 Waru students who liked game online to increase of English skill, there are: Robertus, Dwi Habibi, Tangguh and Zalsa. The most mistakes of them were 6 minimal pair words. The last from Junior High School 4 Waru, there are 5 students who liked game online to increase their English skill, they are: Ezra, Diaz, Danis, Iqbal, and Abdillah. The most mistakes of mispronounced by them are 6 minimal pair words, however, the least mistakes to pronounce minimal pairs words is only one. The students used games to develop English speaking skills. English game online could improve student pronunciation. The most results of students who are applying English in the student's daily life are from Junior High School 4 Waru, however at least pronunciation error there was from them.

4.2 Discussion

From the result of the data analysis, the researcher concluded from all the data came from State Junior High School students in Waru Sidoarjo in research finding, it shows the differentiation between each school. The most pronunciation errors come from Junior High School 1 Waru students, while the least mistakes of

learn English and where is the place of the students learning English. Then, students' daily activities affected the English pronunciation skill and listen English music, watch English movie, and play game online by listen the instruction as English language or game offline with English.

First, the student's lack of English learning, the students who did not like English, they still studied English at school. In school, their pronunciation error consists of 6 minimal pair words by each other, there was not much different from their friends because they had some other aspects that could improve their pronunciation. However, there were 2 students who made more mistakes than the other students who did not like English. Therefore, learning English in English courses only there is not enough to practice of English pronunciation correctly. Mustikareni (2013) says that, habit of pronouncing the word that can be affected by imitating someone in pronouncing the words, the students are disposed to imitate someone who they believe in perfectly, it can be teacher or tutor or the others. It means that, error in pronouncing words happen when they were copying the wrong models.

Second, situations that might causes based on student's daily life, such as listening English music, watching English movie, and playing English game. Based on daily life of the students, watching movie allows them to learn vocabulary, as well as pronunciation. When people are watching movie, they will know how to pronounce that words based on what they see. Sanusy says, using English movie the students expected what is the pronunciation by the speaker and can be improve their ability to speak English by imitating what is said by film

players, encouraging students or watching to do the same thing as what they see and hear in terms of how to talk, how to run, and what told by the story and so on. We can imagine and apply it in reality (2014).

While listening music can improve of pronunciation also, people who listen to music will follow or mimic what they listen unconsciously, which in the case what is the most students usually do. Pratiwi (2014) conducted a research explained this media is expected to affect the development of pronunciation and improve listening habits in children. English pronunciation is one of the important elements in learning English and the easiest method to practice word pronunciation is through listening methods.

The last, based on English game and online game, that could developed in speaking skills students are increasingly increasing and competing, which is like a game that refers to utterance, structure, and vocab. According from Nurbadri (2017), games online that could improve English pronunciation for children, the positive impact of playing games online was the ability of the brain to hone or analyze something more increased, more creative, imaginative, and English is learned to be better, from nine out eleven students can improve proficiency in their English in terms of vocabulary and pronunciation. It means that, English game can improve speaking skill to young learners, such as game online with listening of the sound and with some notification from online game in the smartphone.

In this research, the researcher gave questionnaires were given to complete the requirement of this research. However, all of the previous studies before did

- b. Situations that might causes of pronunciation error by Junior High School students in pronunciation were divided into two situations there are the lack of student's learning English and the students who applied English in their daily activities. Greater influence in English pronunciation learning or reducing English pronunciation in daily activities of the students such as watching English movie, listening English song and support with the English game.

5.2 Suggestion

From result, the researcher shows that Junior High School Students in Waru Sidoarjo made error pronouncing in minimal pair words consists of English consonant and vowel sounds. Although, some students did not make errors in pronouncing minimal pair words consist of English consonant and vowel sounds. Therefore, the researcher would like to give some suggestion which is hopefully for the next researcher, teacher, and Junior High School students.

1. For Teacher

The teacher give motivation to Junior High School students in pronouncing English words especially how to pronounce minimal pair words that consist of English consonant and vowel sounds, because that result shows Junior High School students often make error pronouncing in minimal pair words consist of English consonant and vowel sounds. The teacher can give suggestion with reading English book. Then, the lecture can support with listening English songs,

watching English movie, and giving English game when learning process. It might be helpful to improve their English pronunciation.

2. For Students

Junior High School students must be self-awareness to pronounce English consonant and vowel sounds, especially the students who want to more deeply learn English. You can read English book, listening English music, and watching English movie, and you can changed your language into English in your smartphone for know how the write of English word.

3. For Further Researcher

This research there is no perfect enough to overcome the problems of students made error in pronouncing minimal pair words consist of English consonant and vowel sounds. The writer expects for the next researcher can more completing this research and previous research.
