CHAPTER V

CONCLUSION AND SUGGESTION

This chapter is about the conclusion of the study which intends to answer the research question. Besides, the researcher would give some suggestions related to the consideration in data collection instrument selection in writing proposal.

A. Conclusion

Based on the research findings, there were four categories of students' consideration in selecting data collection instrument in writing proposal.

1. Considering internal factor

29 students (36,25%) preferred to consider internal factor such as problem or case, research question, topic or theme, focus of the research, aim of the research, scope and limitation, key terms and variable, data, method or approach, research design, data collection technique.

2. Considering external factor

18 students (22,5%) preferred to consider external factor such as subject or object of the research, place and time, population, title, the implementation of the research, theory, suitability, availability and the limitation of the research instrument, validity and reliability, strong and weakness of the instrument.

3. Considering internal and external factor

22 students (27,5%) preferred to consider internal and external factor such as approach or method, implementation of research instrument, title, population and sample, analysis, research problem or research question, subject or object of the research, theme or topic, aim, purpose or goal of the research, scope and limitation, validity, easiness of instrument, data, research design, place, accessibility, background of the research.

4. No considering internal and external factor

11 Students (13,75%) did not consider both internal and external factor in selecting data collection instrument. They only thought about the level of difficulty or easiness of the data collection instrument.

B. Suggestion

Based on the result of this study, there are some significant suggestions from the researcher which are stated as follow:

1. For the teachers

The teachers should emphasize the need to select proper data collection instrument to the students. It means that the teacher ought to give deep and more explanation about how to select proper data collection instrument.

2. For the students

The students should learn and follow the proper way to select data collection instrument. Therefore, they have to be more pay attention and careful to the things that should be considered to select the data collection instrument.

3. For the further researcher

The further researchers who want to do a research regarding this topic, they can do the research from the other aspects such:

- a. The students' ability to select data collection instrument
- b. The students' ability in defining operational meaning of key terms
- c. The students' difficulties in designing research method, etc.
