CHAPTER V

CONCLUSION

After analyzing and interpreting the data, the writer comes to the conclusion and suggestion formulated in this chapter. The conclusion is drawn based on point of the whole of this study while suggestion is gives for the next researchers who are interested in doing further researches in the same field of study.

5.1 Conclusion

This study is about the language function used by Alicia and dr. Rosen in A Beautiful Mind movie. The writer wants to find out types of language functions that used by Alicia and dr, Rosen and also wants to find out the language function that mostly used by Alicia and dr. Rosen in A Beautiful Mind. In this study, the writer limits her source of the data. The writer focused on Alicia and dr. Rosen's utterances when having a verbal communication with John Nash who sufferer schizophrenia in A Beautiful Mind movie. To answer her statement of problems, the writer used language functions proposed by Roman Jakobson (1960). The language functions are expressive function, conative function, referential function, phatic function, metalingistic function and poetic function. In doing this study, the writer used descriptive qualitative approach. Then, the data analysis presentation is based on time sequence appearance. The codes on each datum represent the number of datum and Alicia and dr. Rosen's utterance data. Besides, the data analysis is explained directly after displaying the data.

78

From this study, the writer found that there are only five types of language function from six of language function that used by Alicia and dr. Rosen in A Beautiful Mind. Those are referential function, conative function, phatic function, expressive function and metalinguistic function. In this study, the writer did not find any poetic function.

Based on the writer's data, the language functions mostly used in the film is referential function with occurs 45 times used to tells, inform or explain about something to make a good verbal communication with schizphrenia sufferer. When Alicia and dr. Rosen doing verbal communication to John with referential function, John understand about what Alicia and dr. Rosen's says and also he always give a good response directly or indirectly. John feels better to communicate with someone else if they talk with soft voice then make it clear.

5.2 Suggestion

The writer would like to give some suggestion for parents, family, psychiatrist or people surround the schizophrenic and the next researcher to use the result of this study as the additional reference for study in language function. To parents, family, psychiatrist and people surround the schizophrenic are suggest to use more referential function of language when they are doing verbal communication with people who suffer schizophrenia, because people who schizophrenia in this movie can give good response by using this function of language.

To the next researchers, this study is only analyzing on types and which mostly occur being the effectiveness of language functions. It will be more interesting to analyze by using another theory on language functions. Such as use function of language theories that proposed by M.A.K Halliday or Van Ek and Alexander. In addition, to the next researchers suggest choosing field research in real life, means does not research movie, in order to compare and contrast the finding of this movie and the finding of the real life.
