

A. Research Findings

The researcher did some observations and interview. Moreover, the researcher became a non-participant and the teacher became the subject of the research. In this observation, the teacher prepared the materials about narrative text and simple past tense. The researcher asked to observe the teacher's teaching and learning process in two meetings and the researcher tried to take an audio and video taped to get the whole activities in classroom discourse. Afterward the researcher found out what ways that the teacher has done when she elicits students' understanding and it almost had done by using Socratic question in a specific taxonomy in a form of interactional transcript. Here, the researcher tried to analyze the classroom discourse analysis in some kind of conversational analysis among the interactions between teacher and the students (see appendix 9). The researcher points out the analysis into some kinds of extracts in the table forms. The results of analyses of teacher's eliciting stage using Socratic question in the activities of curriculum 2013 are showed in forms of table analyses (see appendix 9).

2. Teacher's Step of Teacher's Eliciting Stage using Socratic question in the activities of curriculum 2013

The researcher found the steps of teacher's eliciting stage using Socratic question in curriculum 2013 generally in a form of a graphic. The researcher found the eliciting stage that done by the teacher was like the schema below.¹

Graphic 4.1 Teacher's eliciting stage that the researcher found

Further explanations about these steps are explained in the discussion.

3. The Effect of Teacher's Eliciting Stage Using Socratic Question in Curriculum 2013 of the Eighth Grade Students

The researcher prepared and gave questionnaire to the students after the teacher's teaching and learning processes in order to know the effects of the teacher's activities to their understanding in teacher's questions in two meetings.

The researcher divided the questionnaire based on their interest and their teacher's

¹ Based on observation session done by researcher to Mrs. Yulindria as teachers for English materials in the eighth grade students at SMPN 25 Surabaya on Friday, 22th of May 2015 at 07.30 a.m

Point 3: *Saya secara aktif berpartisipasi dalam diskusi, menjawab pertanyaan dan/atau mengklarifikasi hal yang saya tidak paham*
(Selalu 14%, Sering 19%, Biasa 28%, Jarang 31%, Tidak pernah 8%)

Point 6: *Saya berfikir mendalam ketika guru bertanya pada saya*
(Selalu 58%, Sering 25%, Biasa 11%, Jarang 6%, Tidak pernah 0%)

(Aku berusaha banyak 56%, Aku berusaha sebisaku 44%, Aku berusaha hanya sedikit 0%)

B. Discussion

In this study, the researcher found out what the teacher's eliciting stage using Socratic question is and it was done by using Socratic question in a specific taxonomy in a form of interactional transcript and observation checklist. Here, the researcher tried to analyze the classroom discourse analysis in some kind of conversational analysis among the interactions between teacher and the students in two meetings. Meeting 1 that focused on the nature of the narrative text and meeting 2 that focused on the grammar of past tense. The researcher pointed out the analysis into some kinds of extracts based on each activities of curriculum 2013. The analyses of teacher's eliciting stage using Socratic question in the activities of curriculum 2013 in meeting 1 as follow;

a) Observing Session

In extract 1.1, the researcher found the teacher's eliciting stage using Socratic question. Teacher elicited the students' understanding by asking questions to clarify their behavior before learning the lesson. The teacher said "What we usually do? Do you still remember?", "Would you please say in Bahasa Indonesia?", and "What does it means?" to clarify students' understanding about something that they have known before. This is the type of Socratic question where the teacher asked the students for their clarification. Again, the teacher elicited the students' understanding by asking question to get the students' idea about their viewpoints or perspectives on wise word such as when the teacher said "Any students who know the meaning?" and "Do you agree with your friends' idea?". According to Scrivener, Socratic question can be used to guide students in generating thoughtful ideas.² It can be concluded that the teacher gave Socratic question mostly to get the students to clarify what they have learnt before and to probe the students' viewpoints or perspectives about something. The interaction is thoughtful and students give full responses to the teacher.

² Jim, Scrivener. *Classroom Management Techniques*. (UK: Cambridge University Press, 2012), 134

e) Communicating Session

In the last stage of curriculum 2013, teacher got the students to fill the tasks and share it together in a discussion that happened in the classroom. Teacher also used Socratic question to connect what they learned and to promote the students' deeper thinking. This is the analysis of the stage;

In extract 1.5, teacher gave the students task to do in a group. Teacher elicited students' understanding using six types of Socratic question, they are; question to clarify, question to probe assumptions, question about reasons and evidences, question about viewpoints or perspectives, and question about the question. For instance when teacher said "What about the prince?" it means that the teacher wanted to clarify what the students knew about the prince. Moreover, the teacher said "Can you describe? Can you guess? What about Maurice?" it means that the teacher wanted to get the students' assumptions about the answer. Sometimes the teacher said "Why do you think that Belle has a lot of passions?" it means that the teacher wanted to get the students' reasons or evidences to prove their answer. The teacher also said "Do you agree with your friend's answer?" it means that the teacher wanted to get the students' viewpoints or perspectives about the answer. The last, the teacher said "Any questions about this question?" stated that the teacher wanted to get the students' response to the questions.

Afterward, the analyses of teacher's eliciting stage using Socratic question in the activities of curriculum 2013 in meeting 2 showed as follow;

a) Observing Session

In extract 2.1, the researcher found the teacher's eliciting stage using Socratic question. Teacher elicited the students' understanding by asking questions to clarify the students' understanding about the song. The teacher said "Do you know what is the title of this song?", "Ilham, What did you do to your mom this morning?", and "What did you do?" to clarify students' understanding about something that they have done before. This is the type of Socratic question where the teacher asked the students for their clarification. Again, the teacher elicited the students' understanding by asking question to get the students' idea about their viewpoints or perspectives of the song such as when the teacher said "Kira-kira what is the song about?" and "Tania, do you agree with the answer?". Teacher also said "Can you guess?" to get the students' assumptions about the song. It can be concluded that the teacher gave Socratic question mostly to get the students to clarify what they have learnt before and to probe the students' viewpoints or perspectives about

something and to get the students' assumptions. The interaction is thoughtful and students give full responses to the teacher

b) Questioning Session

The teacher asked questions about the importance of learning grammar. In this stage, teacher always uses Socratic question to guide the students to find the answer by themselves. The teacher began by asking question to get the students' implications and consequences. Afterward, the teacher mostly used Socratic question to probe reasons and evidences followed by their assumptions. Here is the analysis from this stage;

In extract 2.2, teacher elicited students' understanding mostly is used to clarify about the importance of learning grammar when the teacher said; "I want to ask you, is it important to master the structure of the grammar?". Moreover, to get the students to think deeply, the teacher guided the students by giving a simple question to probe reasons and evidences from the students such as "Can you explain why?" to the students. The interaction between the teacher and the students was active and teacher gave thoughtful question so that the students are maintained to think deeply. Once, teacher gave feedback to the students to make the materials clear. Teacher also uses types of Socratic question to probe assumptions about the topic that they learned.

c) Exploring Session

In this stage from extract 2.3, teacher often used Socratic question to check the students' viewpoints or perspectives, to clarify their thought, to probe

d) Associating Session

In extract 2.4, teacher mostly elicited students' understanding by giving questions to clarify and to probe assumptions from the students. When the teacher said; "What is your verb??" means that the teacher wanted to clarify the students' understanding about the verbs. When the teacher said "Is it true that this one is a verb?" it means that the teacher wanted to get the students' assumptions about the right verbs. The students' responses are thoughtful and gave chances to develop the students' deeper thinking.

In the last stage of curriculum 2013, teacher got the students to do the board games and share it together in a discussion that happened in the

classroom. Teacher used Socratic question to connect what they learned and to promote the students' deeper thinking. This is the analysis of the stage;

In extract 2.5, teacher gave the students games to do in a group. Teacher elicited students' understanding using Socratic question to get the students' clarification, to probe reasons and evidences, to get the students' viewpoints or perspectives, and to get the students' implications and consequences about the materials. The teacher said "what does it means?" to clarify the meaning from the students. Afterward, the teacher said "Do you know why?" to get the students' reasons about the answer. Teacher said "do you agree with me?" to probe the students' viewpoints or perspectives about the materials. The last, the teacher said "is it important for us to know how to read this word?" to get the students' understanding about implications and consequences about the importance of their ability in reading words.

Based on the discussion above, the researcher concluded that the teacher's eliciting stage using Socratic question can be seen through the activities of curriculum 2013 by implementing the types of Socratic question to reach the goals of teaching and learning activities.

Teacher gave ideas to the students through giving Socratic questions

The students responded or answered the questions.

Teacher gave feedback to the students

[illegible]

Graphic 4.1 Teacher's eliciting stage that the researcher found

It is almost similar with the theory that stated by Siti about the stage of elicitation, According to Siti there are three stages of elicitation;⁴

1. Teacher conveys a clear idea to the students, perhaps by using pictures or gestures or questions, etc.
2. Students then supply the appropriate language, information, ideas, etc.
3. Teacher gives them feedback by asking them what they really think. Ask open question that enable them to say what they want to say and feel the intention within them selves simply to listen and learn.

Based on observation session, the researcher recorded the activity during teaching and learning processes. The material which was given to students was quite understandable. The researcher could see the situation from students which could answer teacher's question most of the time. Sometimes they asked question when they did the task and did not know the meaning of the question. The material which was given and the teacher's way in eliciting to the students can extend students' knowledge. This was proven by students' answers which were various. Those answers were logic and right even though some of them answered it by using Indonesian language. Teacher always makes the material based on the syllabus and developed it by herself. Teacher also makes the material in different

⁴ Siti, Nafiatun. *The Use of Elicitation Technique in Learning to Improve Students' Speaking Skill (A Classroom Action Research of The Second Year of SMK Diponegoro Salatiga in The Academic Year 2012/2013)*. (Salatiga: State Institute of Islamic Studies (STAIN) Salatiga, 2013), 34.

ways in order to make students easy to catch the material. This makes students happy to join the class.

To support teaching and learning process, teacher usually used media to make students interested and enjoy the class. Teacher always used LCD projector while teaching in the classroom. This was because the students enjoyed when the teacher shown something that interesting from LCD. Moreover, teacher also applied total interaction during teaching such as motivating used questions, connected what they learnt from their daily life, gesture, and many other interactions. Teacher made students free to communicate each other through sharing in a discussion. The main point was they could understand the material well. Teacher could create the atmosphere in class well to make students feel comfort in learning process. She was very friendly and creative in guiding students. Sometimes she checked students' understanding by giving oral and written test to know whether students understood the material well or not.

During teaching and learning process, students paid attention to teacher's explanation. Students could answer teacher's question directly or if they did not know, they consulted the difficult word to the teacher. To make students understand more during teaching and learning process, teacher also gave warming up to introduce the material. The teacher gave songs to students to refresh their minds before and after the lessons. When students did the assignment, teacher walked around the class to check students' activity. Helping students' difficulties,

correcting students' error, and giving feedback in the end of the class were also the part of guiding students during teaching and learning process.

After doing interview, the writer could get the data about the teacher's opinion and the teacher's problems which were appeared after teaching and learning process in English teaching when the teacher elicits students' understanding by using Socratic question. As the result, the teacher has used to apply some forms of Socratic question in teaching and learning process without knowing those are called Socratic question.

3. The Effect of Teacher's Eliciting Stage Using Socratic Question for the Students

To answer the third research questions about the effect of teacher's eliciting stage using Socratic question of the Eighth grade students especially in 8F as an object of the research, the researcher gave questionnaire to the students after they have been thought by the teacher in meeting 1 and meeting 2 and analyzed through some observations in the classroom. The researcher analyzed the data in forms of percentages where the researcher got from the students' numbers and the 8F class consisted of 37 students. The more students choose the higher percentage is. For further information is explained as follows:

In meeting 1, according to the students' result from point 1 up to 6 about the students' interest in learning English shown that most of them were ready to learn English based on their choices. They chose the choices 'always' higher than 'often', 'sometimes', 'general', 'a little', 'never' approximate up to 44% from the

students' numbers and students' choices. Moreover, about the teacher's evaluation based on the students' choices shown that:

1. Analysis number 1: Students mostly choose Good for about 44% higher than other choices. It means that the students have a good motivation during the teacher's activities. The students were motivated to participate in the teacher's teaching and learning activities.
2. Analysis number 2: Students mostly choose Aku berusaha banyak for about 56% higher than other choices. It means that the students were more active during teaching and learning activities.
3. Analysis number 3: Students mostly choose Banyak for about 86% higher than other choices. It means that the students thought that they gain more new things from the teacher after participating in the teaching and learning process.
4. Analysis number 4: Students mostly choose Banyak for about 78% higher than other choices. Based on the result, it can be concluded that the students understood the teacher's questions and gave responses.
5. Analysis number 5: Students mostly choose Baik sekali for about 58% higher than other choices. It means that the students had the better ways of giving response to the teacher's question.
6. Analysis number 6: Students mostly choose 75% higher for about 20 students than other choices. Based on the result, the students had a better understanding about the material during teaching and learning activities.

7. Analysis number 7: Students' opinions about their interesting activities that were done by the teacher are mostly about teacher's LCD media, teacher's question, and the stories. Some of them also stated that they enjoy the discussion.

Moreover, in meeting 2, according to the students' result of questionnaire from point 1 up to 6 about the students' interest in learning English shown that most of them were ready to learn English based on their choices. They choose the choices 'always' higher than 'often', 'sometimes', 'general', 'a little', 'never' approximate up to 49% from the students' choices. Moreover, about the teacher's evaluation based on the students' choices shown that:

1. Analysis number 1: Students mostly choose Excellent for about 50% higher than other choices. It means that the students much more interested and motivated in teaching and learning process.
2. Analysis number 2: Students mostly choose Aku berusaha banyak for about 61% higher than other choices. Based on the result, it can be concluded that the students are much more active during teaching and learning process.
3. Analysis number 3: Students mostly choose Banyak for about 80% higher than other choices. It means that more students believed that they gain more new things from the teacher after participating in the teaching and learning process.

4. Analysis number 4: Students mostly choose Banyak for about 83% higher than other choices. It means that the students understood more about the teacher's questions and they gave responses to the teacher.
5. Analysis number 5: Students mostly choose Baik sekali for about 81% higher than other choices. It means that most of the students had the better ways of giving response to the teacher's question.
6. Analysis number 6: Students mostly choose 75% higher for about 20 students higher than other choices. Based on the result, the students had a better understanding about the material during teaching and learning activities.
7. Analysis number 7: Students' opinion about their interesting activities in meeting 2 that the teacher did mostly showed about teacher's drilling about the verbs, teacher's question, and the game. Some of them also stated that they enjoy the discussion.

Based on observation session, the researcher could see the situation from students which could answer teacher's question most of the time. The students asked question when they did the task and did not know the meaning of the question. The material which was given and the teacher's way in eliciting to the students can extend students' knowledge. This was proven by students' answers which were various. Those answers were logic and right even though some of them answered it by using Indonesian language. Teacher also makes the material

in different ways in order to make students easy to catch the material. This makes students happy to join the class.

The main point was they could understand the material well. Teacher could create the atmosphere in class well to make students feel comfort in learning process. She was very friendly and creative in guiding students. Sometimes she checked students' understanding by giving oral and written test to know whether students understood the material well or not. During teaching and learning process, students paid attention to teacher's explanation. Students could answer teacher's question directly or if they did not know, they consulted the difficult word to the teacher. To make students understand more during teaching and learning process, teacher also gave warming up to introduce the material.

Based on the analysis above, the researcher concluded that teacher's eliciting stage using Socratic question brought great effect on the students' thinking and understanding about the material and the questions that the teacher gave to them. They enjoyed their teacher's activities and feel easy to talk to each other in forms of discussion. According to Permendikbud attachment No. 68 Year 2013 about Curriculum SMP-MTS that stated about the importance of learning English shows that "Learning English at classroom is called to be successful if the students are able to understand the material and to create oral or written text based on their
