## **CHAPTER V**

## CONCLUSION AND SUGGESTION

## 5.1 Conclusion

This research is about Speech-Language Therapy Given to King George VI in 'The King's Speech' Movie. A man with higher status but unfortunately he has some speech disorders such as disfluency, articulation disorder and muteness. To overcome it, he met the speech therapist, named Lionel, to help him cure his problem. Lionel gave King George some treatments and exercises such as muscle strengthening exercises, breathing strengthening exercises and phonetics therapy.

After some efforts and discipline of the king, he finally made it. In his last king's speech, he successfully read the speech until finished. Not only that, he also reduced his stuttering, able to control the pauses, and added no more consonants. He also able to control his breathing while speaking. In the public, he was no longer nervous and muteness. He can interact with people and create a better social life. At least, as a king, his pride increased more and more.

## **5.2 Suggestion**

Hopefully this study can help the next researcher who wants to analyze the same thing about psycholinguistic. At least, this study can be a guidance or inspiring literature for them. Psycholinguistic field is so widely so there is still a lot of problem

to analyze. The theory I used for this study is really applicable, not only about how to overcome people with disfluency, articulation disorder or muteness but there are so many kinds of speech disorder that can be cure by this therapy as stated in Ellen Koslo's theory (look chapter II).

I also suggest the next researcher to analyze the speech disorder in this study using another researcher's theory. And probably able to compare it, which is the fast and best treatment to cure people with speech disorder.
