## INTISARI

Kecemasan kematian merupakan isu yang berkaitan dengan perubahan fisik dan psikologis yang dialami seiring bertambahnya usia. Penelitian ini bertujuan untuk mengetahui pengaruh religiusitas dan dukungan sosial terhadap kecemasan kematian pada dewasa madya. Penelitian ini melibatkan 184 dewasa madya Kampung Banyu Urip Wetan, RT 3/RW 4 Surabaya. Teknik sampel yang digunakan adalah *sampling* jenuh atau total *sampling*. Metode penelitian menggunakan kuantitatif korelasional dengan uji linier berganda sebagai analisis data. Ada tiga instrument yang digunakan yaitu *Death Anxiety Scale (DAS)*, *Religiosity Centralitas Scale (CRS)*, *Multidimensional Scale of Perceived Social Support (MSPSS)*. Secara parsial hasil menunjukkan variabel religiusitas berpengaruh signifikan dengan kecemasan kematian dengan nilai .282, sedangkan dukungan sosial berpengaruh signifikan dengan nilai .498. Berdasarkan hasil analisis regresi linier berganda diperoleh nilai koefisien korelasi (R) sebesar 0,00 dan F hitung 109.533. Hasil tersebut menunjukkan bahwa ada pengaruh yang signifikan antara religiusitas dan dukungan sosial terhadap kecemasan kematian pada dewasa madya.

Kata Kunci : Kecemasan Kematian, Religiusitas, Dukungan Sosial

## **ABSTRACT**

*Death anxiety is an issue related to the physical and psychological changes experienced as we age. This research aims to determine the influence of religiosity and social support on death anxiety in middle adults. This research involved 184 middle-aged adults from Banyu Urip Wetan Village, RT 3/RW 4 Surabaya. The sampling technique used is saturated sampling or total sampling. The research method uses quantitative correlational with multiple linear tests as data analysis. There are three instruments used, namely the Death Anxiety Scale (DAS), Religiosity Centrality Scale (CRS), Multidimensional Scale of Perceived Social Support (MSPSS). Partially, the results show that the religiosity variable has a significant effect on death anxiety with a value of .282, while social support has a significant effect with a value of .498. Based on the results of multiple linear regression analysis, the correlation coefficient (R) value was 0.00 and the calculated F was 109.533. These results indicate that there is a significant influence between religiosity and social support on death anxiety in middle adults.*
